

BRONX TENSION LEVELLING

Bronx tension levelling technology is available to analyze any machine configuration to predict optimum settings for processing each strip type and is:

- Applicable to any tension leveller
- Available as a consultation package
- Important when processing new materials

New materials can also be analyzed on an in-house test rig to give additional information on how best to set up the leveller.

Combining Bronx Active Levelling System with Bronx Optimal Settings will provide a complete automatic levelling system saving valuable operator time and maintaining consistently good quality product. Available for use on any new and existing Tension Leveller.
